

MADIERA, PORTUGAL - HENRIQUES & HENRIQUES

In 2016, the weather conditions were, until the first few days of August, within the normal patterns:

Average +/-10 C in January to average +/-20C in July with levels of humidity within the usual norms. However in August, Madeira had extremely high temperatures, average 29.6 C , strong winds and very low humidity which led to extensive Forest fires.

The Vintage started on 22nd August and ended on 10th October: generally the grapes were in good condition but the yield was small.
